Trade Name: ARTS S.r.l.

Main activities

ARTS is structured in two teams: System Production and services supply: the first is responsible for engineering and development of Integrated Systems on Customer Requirement; the latter assures consultant, training and manpower about data acquisitions and signal analysis.

ARTS has realized many integrated solutions in a wide range of industrial fields as aerospace, automotive and electronic equipment, energy power as:

- test benches for aeronautical (such as JT8 or PW 120) and rocket engine (zefiro);
- automatic test equipment for steering test, real-time data acquisition for suspension device;
- software for communication testing between telecom modems and quality testing of submarine cables;
- development for an ash conveyor (thermoelectric plant) Remote monitoring software for a rubbish burning plant.

Newco Rail

Trade Name: C.A.M.E.P. S.r.l.

Main activities

Expert in the experimental sector, C.A.M.E.P is an ideal partner in the manufacturing of mechanic details.

Main activities: manufacturing of motor critical details (EFA, RE131, SPEU, RE220 Etc.); design and manufacturing of equipments and calibres. Main specialized sectors: welding TIG dpt, department for the amount carried over of Plasma to thread (accredited by AVIO), and non destructive controls dpt (e.g. FPI, ultrasonic and magnetoscopia).

C.A.M.E.P. has got a Metrology Room for testing and is certified by Nadcap for the Aerospace Quality Systems (Expiration Date: 2009, January 31st) for the Welding/Brazing and the Fusion Welding (Expiration Date: 2008, January 31st). ISO 9001 certified.

Trade Name: FOX BIT S.r.l.

Main activities

Fox Bit has been inserted in the Official list of the technological innovation laboratories of the Campania Region and of the Scientific and Technological Research Ministry. The technological cycle proposed by Fox Bit integrates in a modular pipeline the most modern system for the computer aided design (CAD), structural analysis (FEM), engineering production (CAM) and product quality analysis (CAT). Other services: Reverse Engineering technologies, implemented through three-dimensional digital acquisition systems, contact and no-contact, and Rapid Prototyping/Tooling, implemented through processes embezzled (milling-turning CNC) and the most modern additive processes (selective sintering and starch and chalk powder deposition). Main fields of action: aerospace, automotive, precision mechanical, multimedia simulations, cultural and medical assets.

CHAIN Consorzio

Trade Name: ILMAS SUD S.p.A.
Main activities

Founded in 1988, Ilmas Sud is a manufacturing company which operates in the aeronautical and aerospace industry. Highly specialised in technical and technological terms, the company is geared to respond to the demands of the international market, and covers the entire production cycle. In its production plant, which boasts an area of 3400 square metres, all the assembly operations are carried out in dedicated areas.

The company possesses technical plant, surface treatment facilities for manufacturing tools and numerical control programmes used in the production process, which it supplies as finished products.

Today the Ilmas Group is a highly specialized manufacturer in the aeronautical and aerospace industry.

Ilmas Sud is part of the IMA consortium and is currently participating, on a 'risk-sharing' basis, in important programmes together with other leading companies in the sector.

It also has many technical partnerships with companies, research institutes and Italian and foreign universities, concerning research, development and production activities.

Calef Rotondella (NA) and CDTC (Ivrea)

Trade Name: S.A.B. AEROSPACE S.r.l.

Main activities

The company has the infrastructure and the staff experience to provide Unmanned Aerial Systems (UAVs) that include an own designed plane, a Guidance Navigation & Control unit and a Ground Control Station. Additionally SAB is experienced in thermo-mechanical solutions for aeronautic and space applications.

The core business of the SAB Aerospace can be summarized with the following activities: Satellite mechanical design, Unmanned Aerial Vehicles (UAVs), Satellite Attitude Control Systems, Structural Health Monitoring Systems, Research, Applications.

Trade Name: SINTART S.r.l.

Main activities

Sintart is specialized in mechanical and aeronautic engineering, Information Technology.

Products/services :

1) Design Engineering - Design and drawing with the most advanced CAD system; structural stress analysis with CAE system; composition of the bill of materials.

2) Manufacturing Engineering - Studies about production methods in components manufacturing and assembly, according to customer's technologies and quality standards; definition of manufacturing bill of material; drawing analysis and definition of production methods, fabrication and assembling tools; tool & jigs manufacturing; elaboration of part programs for numerical control machine and technical support in prototype production; cost estimation, material requirements, sub-contracting plans, quality plans.

Trade Name: TEKNOSUD GROUP S.C.a.r.l.

Main activities

TEKNOSUD GROUP is a CONSORTIUM composed of four companies: TEKNOSUD, TS ENGINEERING, TS TECNOLOGIE and TEKNOSUD COMPOSITI that currently employs 120 individuals. Its main activities are developed through partnership and subcontracting agreements with major companies who operate in the

aerospace, aviation, automotive, rail and marine sectors. Through these activities, the group has acquired a broad range of experience in design and structural analysis (i.e. static, dynamic, crash and fluid dynamics) of mechanical parts. In recent years, particular attention has been given to the design and analysis of composite materials. Within TS GROUP, there are engineers who have extensive experience (more than 30 years) in airframe structures (technical field and management) as well as widespread experience in the design and fabrication of primary structures in carbon epoxy.

Trade Name: TESI TECNOLOGIE E SERVIZI INNOVATIVI S.r.l.

Main activities

Tesi produces sheet metal components and numerical control milling components for aircraft structures of the main world aeronautical builders. The company has the facilities and the know-how to carry-out the whole production process from the raw materials up to the final component or sub assembly "ready to fly" including heat treatments and surface protection treatments. The technical know-how allows the company to cooperate with the customer from the design up to the development of tools and routings.
